T1002	Direct Service interventions must be medically based services that are within the scope of the professional practice of the Registered Nurse, provided during a face-to-face encounter, and provided on a one-to-one basis. Services include: <ul style="list-style-type: none"> • Catheterizations or Catheter care • Maintenance of tracheotomies • Medication administration • Oxygen administration • Tube feeding • Suctioning • Ventilator Care 	Up to 15 minutes Maximum of 60 minutes per day

Nursing services are professional services relevant to the medical needs of the students provided through direct intervention. Direct service interventions must be medically based services that are within the scope of the professional practice of the Registered Nurse (RN), provided during a face-to-face encounter, and provided on a one-to-one basis.

Direct service interventions require a physician's written order when the initial need for services is determined. Direct service interventions must be reviewed and revised annually or as medically necessary by the beneficiary's attending physician. The nurse is responsible for notifying the attending physician of any change in the beneficiary's condition which may result in a change or modification to the care plan.
